ABOUT US

Our company, Memsan Melikler Machinery Industry, was established in 1972 in Adapazarı. In 2016, it became incorporated under the name Memsan Teknik Makina San.Tic.Ltd.Şti. Initially, our company produced hydraulic adapters solely for tractors. By expanding our machinery park, we now serve with a wider variety of products in our facility with a closed area of 3000 m², offering machining, laser cutting, and a broad range of mechanical products. Additionally, we implement a quality management system under the EN ISO 9001:2015 certification, focusing on customer satisfaction and quality products.

Defense industry
Automotive
Rail systems
Agricultural machinery
Laser cutting
Welding and bending construction
Hydraulic adapter manufacturing (1/2 Quick Coupling)

Our company has also closely followed technology and raised quality standards to the highest level with computer-controlled CNC machines. As a principle, our company prioritizes quality and focuses on customer satisfaction both before and after sales, considering it a duty to provide the best service to the Turkish economy and industry.

Our principle in our work is to: Provide quality products, Deliver orders on time, Offer the produced product at the most economical cost.

Murat **MELİK**
General Manager

OUR MISSION

To continuously incorporate up-to-date technology in machining, welded construction manufacturing, and automotive mechanical subcontracting, in order to meet the needs and expectations of our country, customers, and the environment through competitiveness, efficiency, and quality of products and employees.

OUR VISSION

To be an organization that, within the framework of Total Quality Management, produces parts through original design in machining, and is committed to continuous development while being socially and environmentally responsible, attaining national and international respect.

OUR QUALITY POLICY

To ensure customer satisfaction without compromising our quality.
To enhance product quality by closely monitoring technological developments.
To do our work right the first time and continuously improve the quality of our work.
This has been established as our quality policy.

MEMSAN
TECHNIC MACHINE
INDUSTRY TRADE LIMITED COMPANY

In the HD-F Laser Cutting Machine, axis movements are performed using a rack and pinion system. Since backlash-free reducers are used between the motor and the reducer, there is no deviation in measurements. Thanks to the highly precise helical gears, very high acceleration (20 m/s^2), high movement speed (120 m/min), and positioning tolerance (0.05 mm) values are achieved.
