ABOUT US

Our core business is metal machining on CNC milling machines and lathes.

The company owns 9 CNC machines, employs 15 workers, and generates a turnover of one million euros.

MACHINE PARK

Our machine park includes 9 CNC machines:

- 6 three-axis machines (working dimensions: x-1100 y-800 z-600mm),
- 2 five-axis machines (x-750 y-550 z-500mm),
- and
- 1 five-axis lathe (Dia 250 x 1050mm).

In addition to standard measuring equipment for quality control, we also have:

Hathor six A

for automatic tool measurement and control

Garant hg1 445355-600

For precise parts inspection

Coordinate Measuring Equipment

Dea Ghibli

Prismo Zeiss

Scirocco-trax

Heat treatment and galvanic protection

In cooperation with our local business partner we can do:

In the field of **galvanized coatings:**

- Hard chromium plating of steel,
- Chemical nickel plating of steel,
- Galvanizing of iron, steel and copper alloys
- Stainless steel electropolishing
- Anodic oxidation of aluminum alloys in a solution of sulfuric and chromic acids,
- Chromatization of aluminum alloys and zinc
- Mn, Zn and Zn-Ca phosphating of steel parts
- Inscription plate design and print using photo metallography, as well as screen printing

For the thermal treatment we apply the following procedures:

- Soft and normalization annealing
- Improvement
- Induction hardening and hardening in vacuum
- Cementation and carbonitriding in gas
- Short-term and long-term gas nitriding
- Powder bronzing
- Hard soldering (brazing)
- Thermal processing of non-ferrous metals

Protective Coloring And Varnishing

The protection procedures are carried out in accordance with international standards. Dyes that are applied come in a wide range of shades and quality: alkyd, epoxy, polyurethane and thermo hardening colors. The combination of different systems of colors, with thicknesses up to 300 µm

Examples of the parts from Our Production

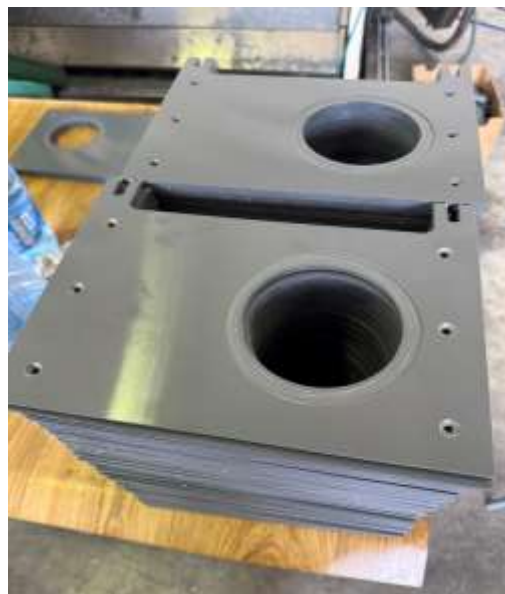

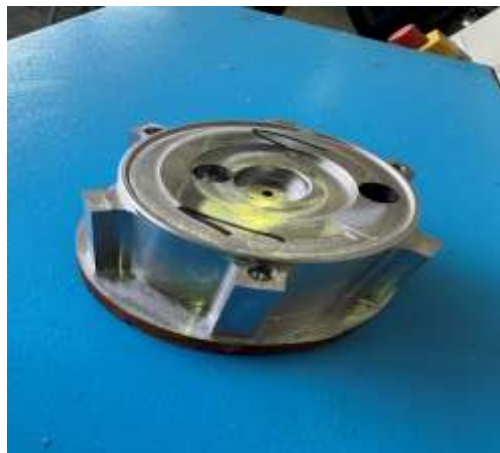

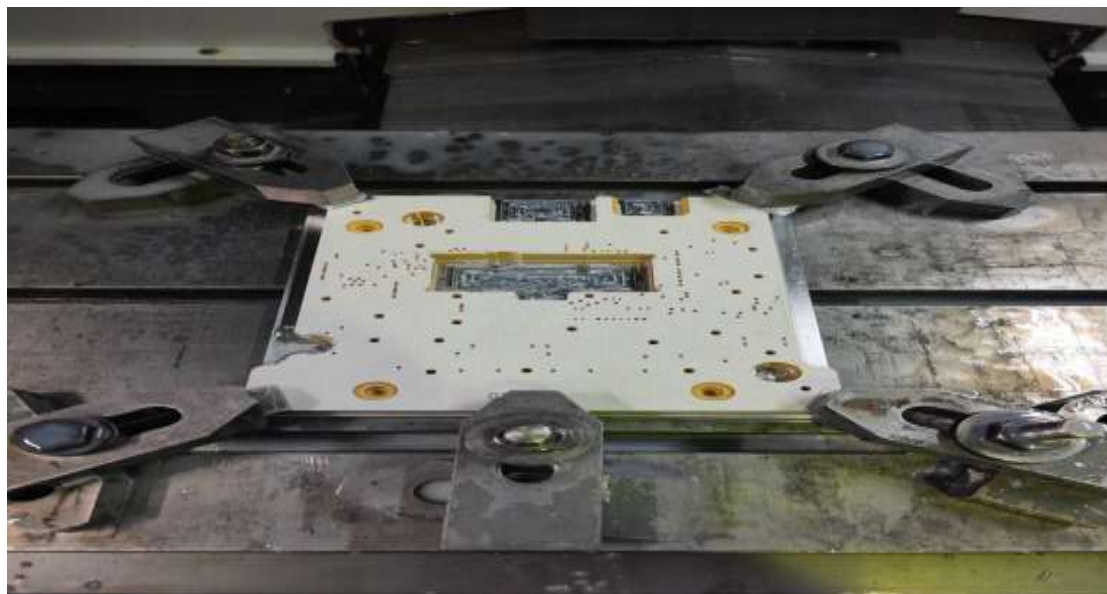

PVC

CEM
