

TOOL MANUFACTURING WITHOUT BORDERS

**CUSTOMISED SOLUTIONS TO CUSTOMER NEEDS THROUGHOUT THE ACTIVE
LIFECYCLE OF PLASTIC AND METAL TOOLS**

AGS GROUP INTRODUCTION

Providing complex products and services for the manufacturing of tools for the plastics and metal industries.

AGS GROUP		
AGS ENGINEERING	AGS TOOL SERVICE	AGS MACHINES
Tool and custom component design, manufacturing and project management	Custom parts manufacturing, tool repair under warranty, - modification and optimization	Sale and service of tool manufacturing equipment

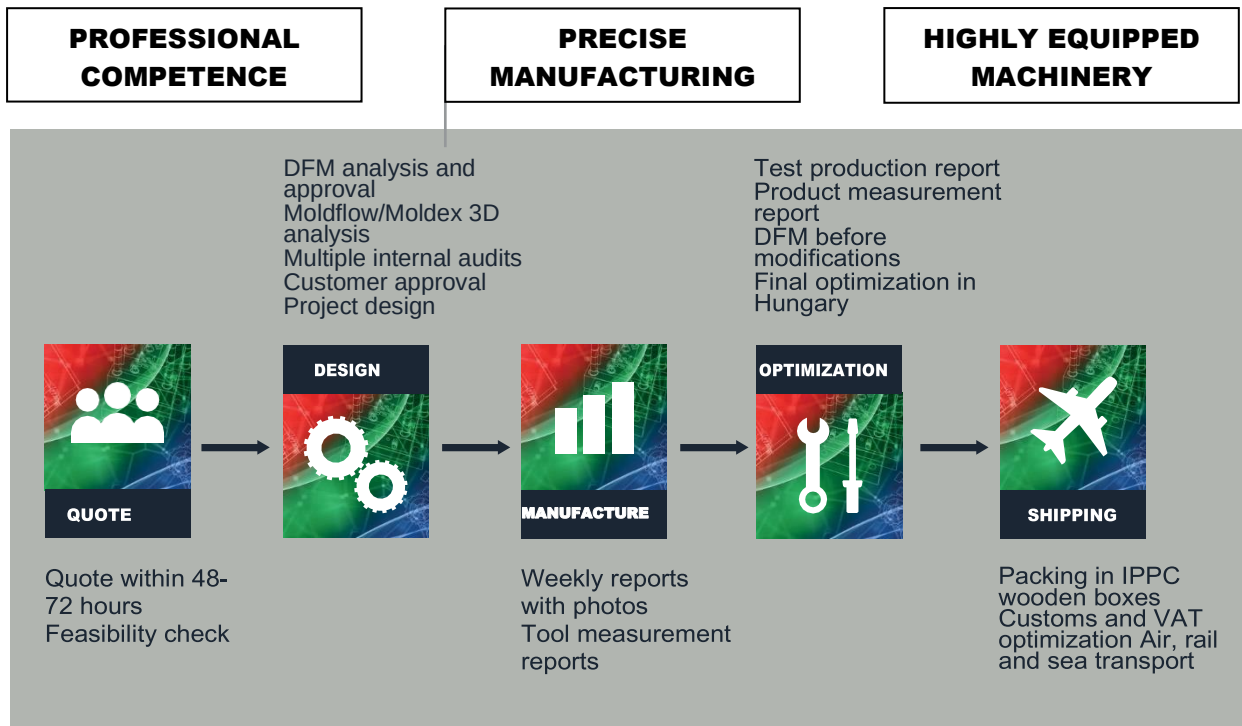

AGS is a group of companies that is powered by the motivation and commitment of its employees, who have left their previous working environment to find a more liveable place where they can use their professional skills to work as a family towards common goals.

TOOL MANUFACTURING WITHOUT BORDERS

-  **Good value for money**
-  **Flexible capacity**
-  **Local presence**
-  **Global commercial approach**

PROCEDURE OF THE PROJECT

Our flexible capacity, tailor-made solutions and honest communication are an extra guarantee for our customers.

OUR PRODUCTS

INJECTION MOULDING MACHINES

BOTTLE BLOWING TOOLS

ALUMINIUM CASTING TOOLS

PUNCHING TOOLS

AGS ENGINEERING

**EUROPEAN
ENGINEERING SKILLS**

**PRICE LEVELS
TYPICAL OF ASIA**

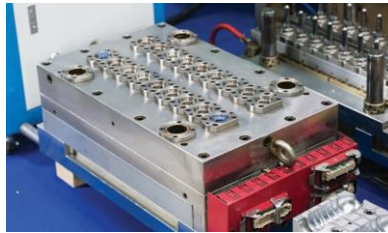

**LOCALLY VALID
WARRANTY**

Design and production of new injection moulding, bottle blowing, aluminium casting and punching tools, as well as custom-made parts with measurement service, local presence and reliable project management.

Tool design

With years of experience, we provide plastic injection moulding tool design. After a consultation and an evaluation based on our technical expertise, we will propose the optimal technology, material and tool. It is important for us to incorporate this technical knowledge into the product at the tool design stage, therefore avoiding production problems later on.

Tool manufacturing

One of the main activities of our company is the production of thermoplastic, rubber injection moulding tools and cold forming tools. The manufacture and possible reverse engineering of parts and spare parts for such tools. We combine the speed and price of Asian mould making with European engineering expertise and guarantees, providing a compact solution for injection moulding companies.

Plastic interim project management

An interim manager has specific expertise that is only needed at a certain stage of a company's development.

Provided at the right time and in the right way, the client gets the right expertise, for the right amount of time, at the right time and for the right level of support that is most needed in the right situation.

AGSGROUP		
AGS ENGINEERING	AGS TOOL SERVICE	AGS MACHINES
Tool and custom component design, manufacturing and project management	Tool repair and modification, optimization, parts manufacturing and warranty	Toolmaking equipment sales and service

Our engineering is the heart of our business: it's where it all started and it's still at the centre of everything we do.

AGS TOOLS

Repair, modification and optimization of injection moulding tools under warranty.

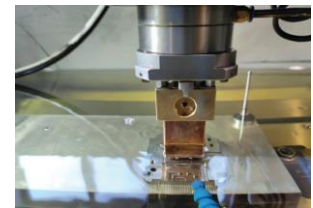

Parts manufacturing

During continuous production, normal wear and tear of the production or manufacturing equipment is inevitable, which means that it is necessary to repair or replace parts from time to time. The manufacture of individual parts is a complex task, often complicated by incomplete documentation and the need to fit the parts produced into worn tooling.

Tool repair, modification

The repair, maintenance, refurbishment and modification of plastic injection moulding, aluminium casting, sand core moulds and related technical equipment is a major part of our services.

We carry out repairs, modifications and maintenance of tools ranging from the smallest up to 2 tonnes, from simple ejectors to complete moulds, from cold inlets to complete hot runner systems, from the simplest to the most complex multi-component tools

Laser welding

Laser welding enables the finest welds to be produced. It can be used to weld alloy and non-alloy steels, nickel-based steel castings, aluminium and its alloys, copper and its alloys (amco, bronze, etc.) and other precious metals. For the repair of damaged production tools the most efficient solution for repairing.

Aluminium mould production

Our company has extensive experience in the production of aluminium and galvanized casting tools, sand core tools and various moulds. Our activities currently focus mainly on the manufacture of coquille casting tools and, to a lesser extent, the manufacture and repair of die casting tools and cutting tools. The tools we produce are largely used for the manufacture of cast aluminium components for passenger cars, which are mostly used by premium automotive manufacturers

Sales of injection moulding tools and the Yudo hot system in Hungary.

As a result of our contacts in Asia, we regularly meet manufacturers whose machines and systems offer excellent value for money, but are not yet available in Hungary.

We have decided to make them available to domestic tool manufacturers as a local sales partner to help them develop.

We set up a team selling injection moulding tooling tools and Yudo hot runners. We are confident that with these relationships we can make toolmaking in Hungary more competitive.

COMPANIES CURRENTLY REPRESENTED:

YUDO

In our opinion, the Yudo team represents good value for money in the hot water systems market, working with unique solutions and non-standard systems.

TAZE

In our factories, most of our machines come from the TAZE team, who are well-established machine tool manufacturers in the Asian market. They sell very stable and reliable machines at competitive prices. Their portfolio includes spark cutting machines, CNC machining centres and conventional machines.

AGSGROUP		
AGS ENGINEERING	AGS TOOL SERVICE	AGS MACHINES
Tool and custom component design, manufacturing and project management	Tool repair and modification, optimization, parts manufacturing and warranty	Toolmaking equipment sales and service

Because of our profession, we have always been fascinated by the "blue" world of machines, which is why we strive to work with and sell the best, most precise toolmaking tools in terms of price-performance ratio.

AGS ORGANISATION - CONTINUOUS DEVELOPMENT TOWARDS COMMON GOALS

YOUTHFUL DYNAMIC

FAMILY-LIKE ATMOSPHERE

A DEDICATED TEAM

Our mission is to continuously evolve with our cohesive, dedicated team to meet market needs and customer satisfaction, and to always offer a tailored solution in the plastic and metal tooling industry - because we plan for the long term.

OUR VALUES

Whether it's our customers or our employees, we represent the same values both externally and internally.

Customer focus	Transparency	Quality	Development focus
Flexible, proactive attitude and quick response Custom solutions adapted to customer needs, standards and reports Colleagues who are always available and ready to answer questions	Transparent processes Honest, open and clear communication	Reliable, professional competence Precise planning, well-equipped machinery, guaranteed production and repair Compliance with external and internal quality assurance standards	Constant development adapted to market needs Tracking global professional and commercial trends
Working together This is the basis of it all: the attitude, work and coordination of colleagues in a family-like company atmosphere.			

Our vision is to lead and lead by example among toolmakers through our corporate culture, reliable service, transparent processes and honest communication, contributing to the development of the entire plastics and metals industry - within and beyond borders.
