we mold you

design and manufacture of injection moulds

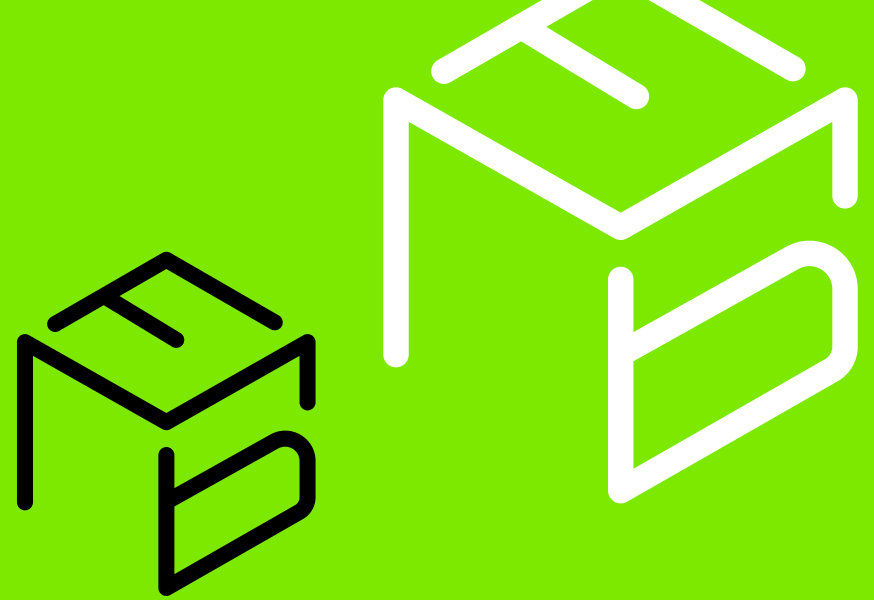

FMB has been designing and manufacturing injection moulds for plastics for over 35 years.

Customised solutions that meet the most demanding customer requirements, ensuring the highest standards of quality, precision and efficiency.

vision

ideas, solutions, visions

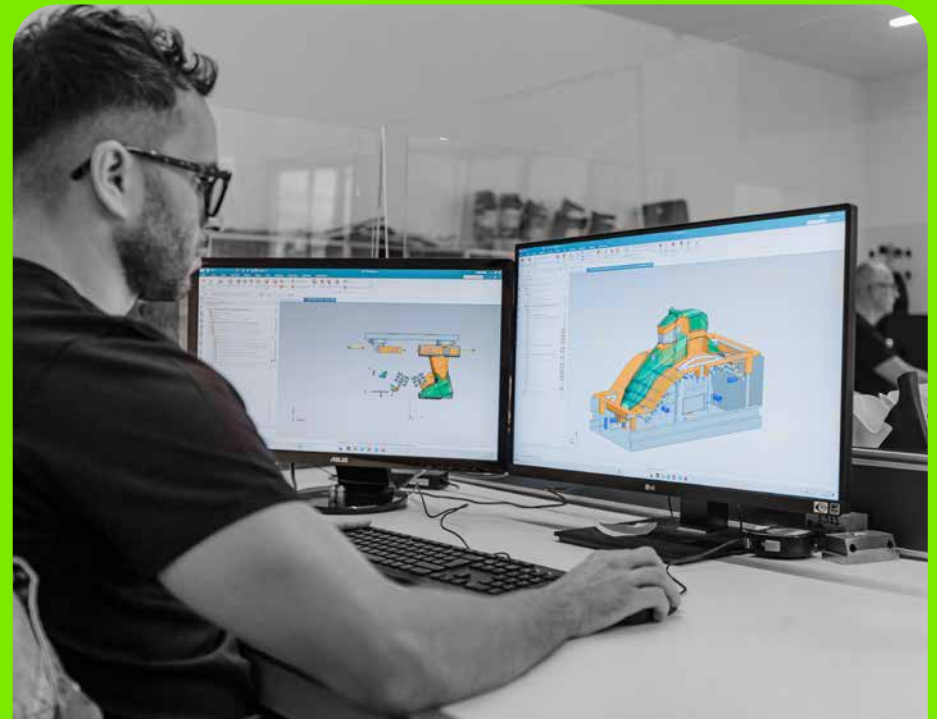

Preliminary consultancy

Preliminary cost analysis and rapid budgeting

Development and design

Modelling, scanning, co-design, prototyping

Our services cover everything, from initial consulting and mould design to the production, packaging, and delivery of the final product.

Well-established partnerships with mould makers and other suppliers allow us to offer additional services, such as prototyping, mould testing, series moulding, and final product assembly.

We offer a **complete**, punctual and efficient **service**. We guide our customer step-by-step, putting our experience at his service, to shape ideas, solutions and visions.

Construction, finishing, assembly

Complete and detailed mould manufacture

Moulding and assembly

Through trusted and established partnerships

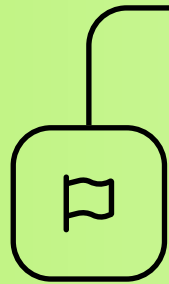

a **history**
of growth,
innovation and
passion

Our journey begins with the union
of small manufacturers, which have
evolved into a **solid and structured
company**, to anticipate and satisfy the
needs of an ever-developing market.

Our strength?

The desire to constantly
innovate and improve

yesterday, today, **tomorrow** | our history

2011

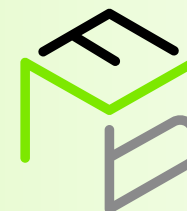

Networking

We join NAT – The plant
covers an area
of 1500 sqm

We research and integrate new ideas and cutting-edge technologies, reinforcing our identity and our leadership in the mould sector.

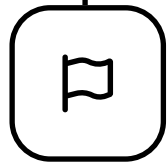

Today, with a team of over 50 passionate and dedicated people, we continue to grow and plan for the future.

We are a team near to the needs of our customers, to turn ideas into concrete projects and effective solutions.

FMB

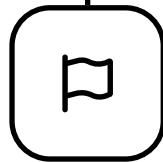

MOLDING EXCELLENCE

2012

We evolve

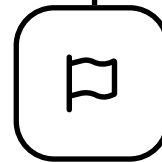

We implement the new palletized horizontal Agie Charmilles Mikron HPM 1000u machine

2013

A certified quality

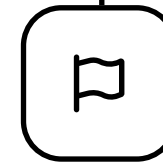

We obtain UNI EN ISO 9001:2008 certification and expand the commercial area

2014

Creating innovation

We obtain UNI/INAIL “LAVORO SICURO” validation and implement our machine fleet with new machining centers

2015

Introducing high-skilled resources

We introduce some important figures in the design and production area, reaching 35 people

OUR

2016

Updating our certification

With ISO 9001:2015 certification we significantly improve our processes

2017

Growing up, again

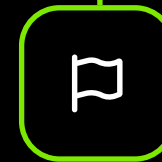

The production area reaches 3500 sqm, to improve the production flow

2022

A constant development

We install new 5 axis CNC work centers, coming into new fields

2024

New goals

We are a team of over 50 people, united by passion, talent and a common vision

HISTORY

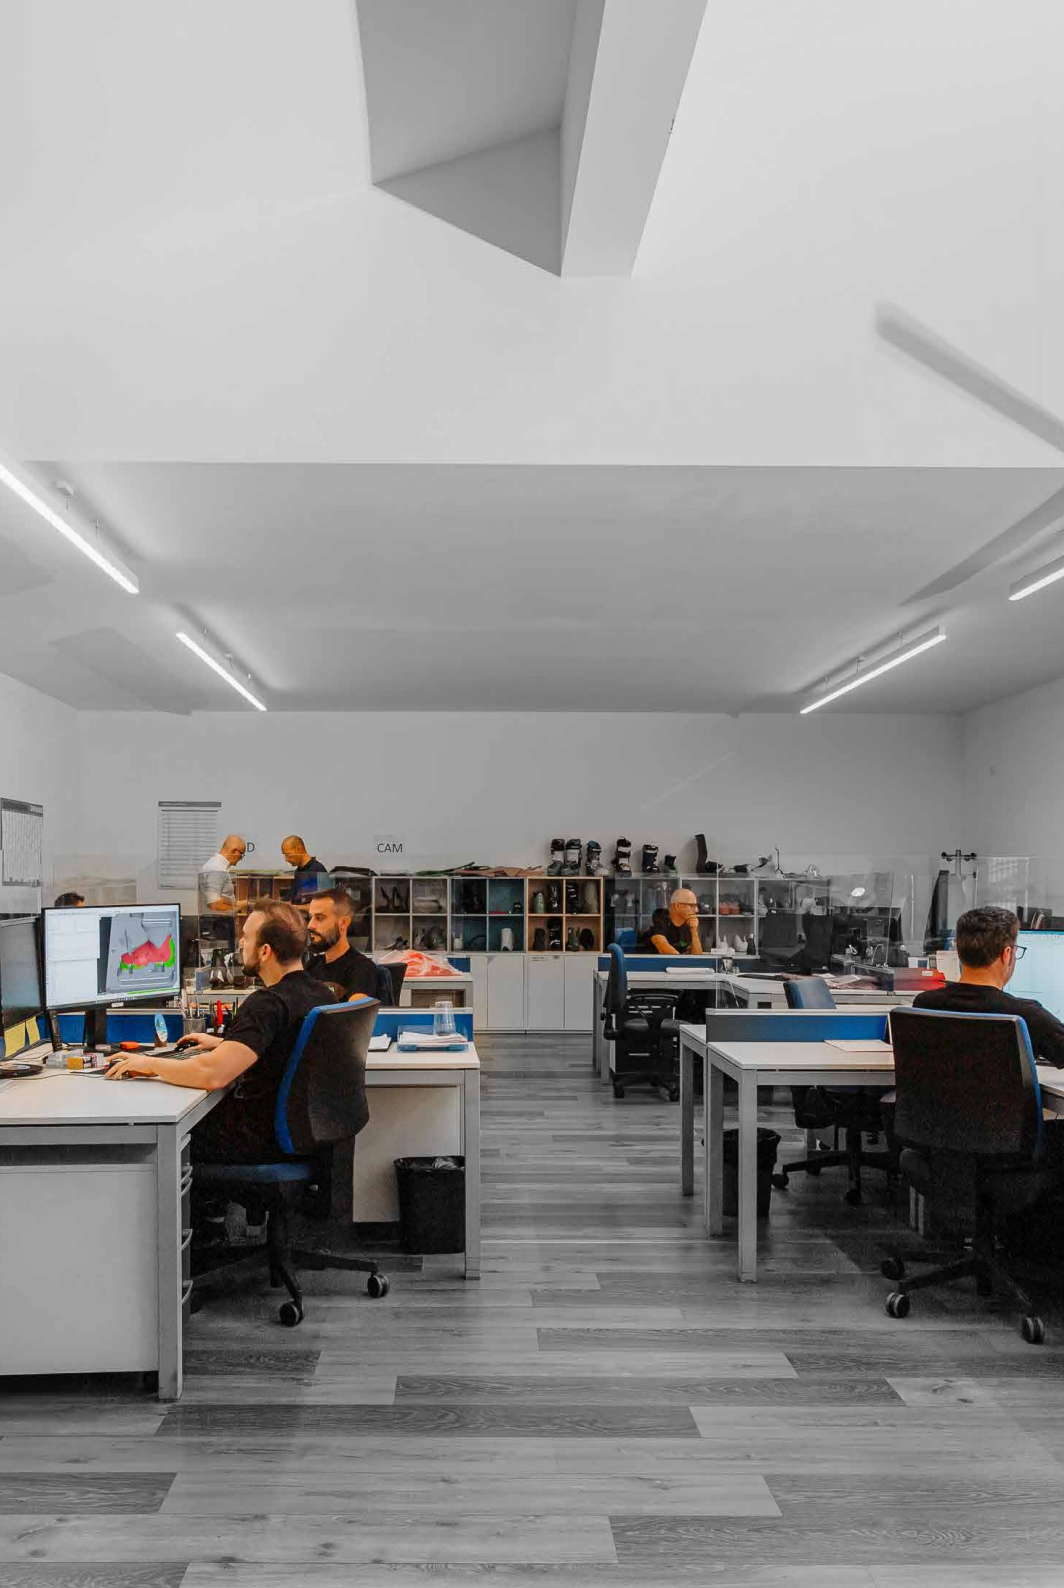

design

where ideas take shape

Design is an important and strategic phase,
which our technical experts tackle with great care,
using the best technologies.

The **FMB technical department** is made up
of 12 professionals experienced in plastic
mould design, divided into three departments
(model development, CAD, CAM), which

work in full synergy to meet all customer
requirements. In addition, we perform
detailed scans for reverse engineering mould
design.

a quality assurance

With our machine fleet, we can fully exploit the potential of Industry 4.0, monitoring performance and optimising time.

We have high-speed **3 to 6-axis working centres**, with working areas of 2500×2000 mm and no weight limits, for maximum versatility. Management is entrusted to specialised

personnel, who work in close synergy with the technical department. The finishing department, with over 10 professionals with great craftsmanship sensitivity, ensures a flawless result.

additional services

For a
turnkey
mold

reverse engineering

from object to project

To develop new moulds from a physical object, obtain a drawing of an existing mould to repair and modify or update it. Fast and accurate scanning allows us to obtain a polygonal mesh in STL format even for complex or large products, and then produce the reference CAD file.

rapid manufacturing

3D printing service

With the support of trusted partners specialized in 3D printing, we provide a rapid prototyping service using high-resolution rigid resin models, turning digital files into physical objects with precision and quickly. An effective solution for accelerating the product development cycle and testing phase.

moulding and assembling

for a complete service

We collaborate with injection moulding experts, to provide our customers with all the services they need: the mould testing, the mass production, the final-product assembly.

We can be a unique point of reference to our customer, to propose the best solutions.

welfare, safety,
people first

our way
of doing business

For FMB, quality is synonymous
with innovation, commitment
and perseverance.

A daily resource and goal, which helps us organise our
activities and inspires our work.

Since 2013 we have been **ISO 9001:2015** certified and in
2014 we introduced a health and safety management system
according to **UNI/INAIL** guidelines.

Thanks to constant investments in safety and technological
innovation, we continue to work on improving our standards
and increasing satisfaction for our customers and our team.

together,
to grow

a shared
development path

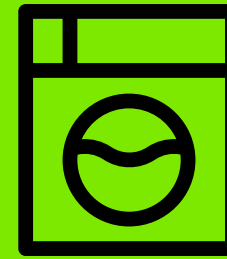

NAT

NETWORK AUTOMOTIVE TRIVENETO

**We are part of NAT -
Network Automotive Triveneto**

A business network established in 2011 by a group of manufacturing and service companies, which - in addition to FMB - includes Anodica Trevigiana Spa, Futura Società Cooperativa, Lucchese Industria Srl, R.I.C. Srl and Metalmont Srl.

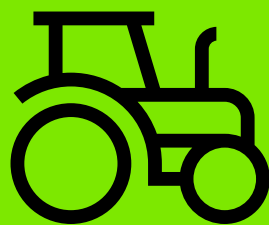

Founded with the aim of providing the automotive sector with a product of Italian excellence, over time NAT has evolved into a dynamic network for sharing experience and expertise, with the aim of increasing competitiveness, innovation and value.

we shape ideas,
in a wide variety
of **fields**

FMB specialises in the design and
production of **injection moulds for
plastics** for different sectors.

Thanks to our wide experience, we give support to customers
in producing moulds for a wide range of applications.
