

Products we find fitting for the international markets

Below, we have made a list of the parts we are producing, and we are able to produce as series units, for various types of customers:

1. Industrial fan cases;

2. Heavy equipment cases;

3. Equipment framework (up to five tons);

4. Ramps and ramps parts;

5. Scissor lifts:

For such projects, we can ensure the fitting of hydraulic and electronic parts, alongside with testing.

6. Steel solar panels supports;

7. Rolling stock chassis (up to 5 tons);

8. Rolling stock chassis ends;

9. Halls and steel structures for buildings (up to 5 tons per sub-assembly);

Examples of subassemblies:

We are also able to produce truss beams:

10. Parts and accessories for agricultural equipment;

We are currently discussing such a collaboration with a German customer on such projects.

11. Industrial air filter frames;

12. Dollies, supports, and various transporters:

Upon request, we can provide various coating solutions: from grounding and painting, to hot dip galvanizing, all based on our customer's request.

13. Special welded beams and profiles, based on the provided drawings:

Below we have a few examples of similar parts: for example, an I-beam (HEA) cut in a 'castellated' manner to obtain a bigger profile. In a similar manner, we can obtain an Ibeam out of plates, by welding them together.
