Home

noun

The place where
a person feels
they belong.

A place where
people can rely
on each other.

Welcome to HELDECO!

HELDECO, located between Turnau and Aflenz in Austria, is a leading pan-European manufacturer of sophisticated system solutions, ready-to-install components and complex spare parts in original equipment quality. As an owner-run technology company, we have been active for over 30 years as a flexible partner to globally operating clients across all sectors.

We specialise in high-end demands, maximum quality and large-scale components. We have been able to prove our know-how in over 14,000 successfully completed projects - and this since our foundation in 1991. State-of-the-art machinery and equipment are the basic prerequisite for us to implement your task personally and with the maximum precision.

From project analysis to the individual processing steps, specification, quality inspection and complete delivery, you can rely on us.

We give your project a home.

”

We want to give your project a home in terms of technology as well as quality. Quality is particularly crucial for us, because it implies one thing above all: Reliability.

Wage labour

Numbers which speak for themselves:

600 years of experience in projects contribute our professionals in total.

70 specialists take care of your project in a highly professional manner

14.000 successfully completed projects in a wide range of industries

Thinking. In large Dimensions.

High-tech facilities
are the foundation
for success.
Our skilled
workers take care
of the rest.

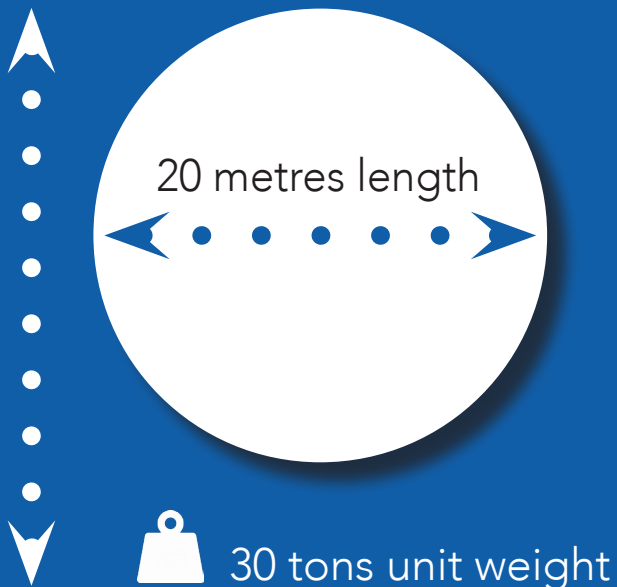

DMG MORI

Would you like to
take a look at our
technologies?
Contact us:

Big results on a big scale.

Our high-tech machinery is designed for machining components with a unit weight of up to 30 tonnes.

We mill components up to 20 metres long, and we turn components up to 7 metres long or 3 metres in diameter.

System solutions

Complex complete systems are in good hands with us. Since decades. As a system supplier, we produce complex components that we then combine into system solutions.

All from a single source.

We keep an eye on your delivery date -
and are always on top of it:

This is ensured by our employees and
experts who coordinate and implement
your requirements.

Even in the run-up, they carry out project
and system checks as well as simulations
based on digital tools.

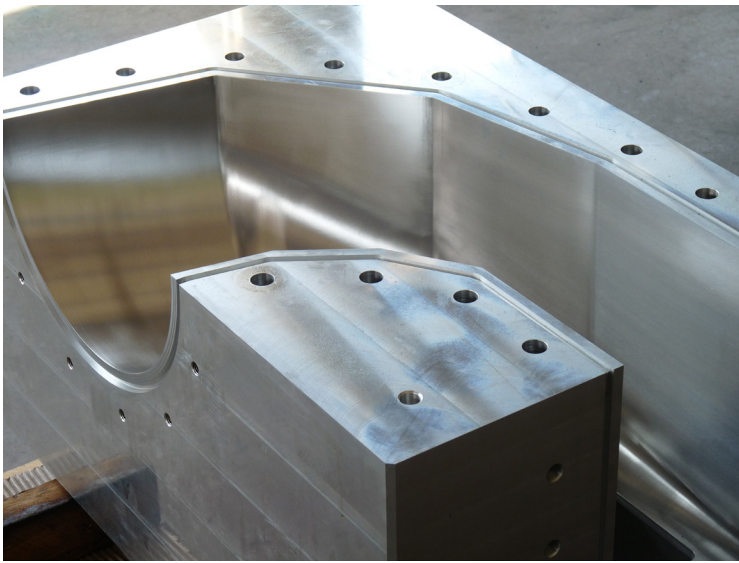

Our expertise from different fields flows into your project.
This enables us to think along with you for new solutions.

With an eye for the essentials.

Our expertise goes beyond mechanical production. We ensure punctual delivery dates, adhere to defined tolerances - and turn specifications into successes. A key factor in this is the choice of materials, on which our employees will be happy to advise you.

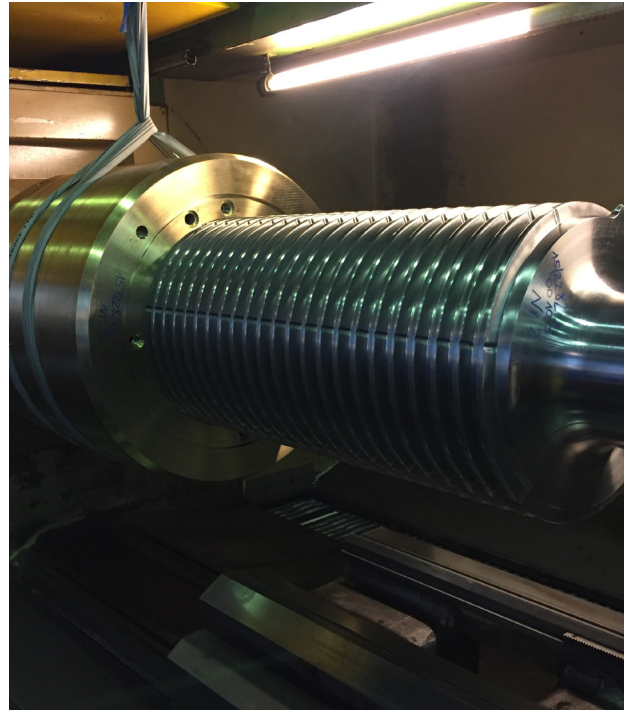

Component manufacture

We manufacture ready-to-install components for prototypes, small and medium-sized series from a single source - from production to quality assurance and assembly. We produce system components with passion, at the highest level and with the technical expertise gained from over 14,000 successfully completed projects. As a manufacturer of components, we are active across all

Retrofit

We specialise in the production of spare parts and the maintenance of components that can be installed in original equipment quality. We repair damaged or obsolete components or restore them if necessary. We are able to process them with lengths of up to 20 metres and unit weights of up to 30 tonnes.

Specialised in spare parts

Based on the 3D data traceability available in our company, we can reproduce parts and components - even without a drawing and without digital or analogue production documents.

We have many years of expertise in the machining of all steel grades (heat-treatable steels), rust and rust-resistant materials, cold and hot work steels, cast steel, nodular cast iron, non-ferrous metals, aluminium, duplex, super and special alloys and much more

Non-existing 3D data may be reconstructed by us.

Our competences

Programming

CNC milling

Measurement (incl. quality

Packaging

Shipping/Logistics

CNC contract manufacturing

On demand and on schedule

Our entire process flow is centrally digitalised, all necessary processing steps are simulated by 3D software as early as the planning phase. Modern machinery is a basic prerequisite for our success.

Our employees possess maximum knowledge in the manufacture of complex components with a high degree of vertical integration, grasp complexities immediately and act with the highest level of experience in dealing with a wide range of

Industry

Heavy industry

Food industry

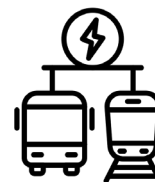

Energy

Yellow Goods

Shipping

Automotive

As a long-term end manufacturer, we have a wide range of references on the international market.

60%

**Our employees stand by
HELDECO. And we stand by
them.**

Over half of our HELDECO team was trained in our company. That proves: Apprenticeships have been close to our hearts for many decades. That is why we have made a name for ourselves as an excellent apprenticeship company even beyond the region.
